Title: Disposable diaper

Claims:

1. A developing type disposable diaper comprising a liquid pervious top sheet a liquid impervious back sheet and a liquid retaining absorbent interposed between both of the sheets, in which a pair of waist support members are disposed on both right and left sides of either of the belly side and the back side, at least one waist support member has a waist support member securing portion to releasably secure the waist support members, and diaper securing portions are disposed on both right and left sides on the side opposite to the side where the waist support members are disposed, in which

One of the waist support member has a linear opening which is formed so as to allow the other waist support member to pass therethrough and disposed with the longitudinal direction thereof being directed to the lateral direction of one of the waist support member.

BEST AVAILABLE COPY

2. A disposable diaper as defined in claim 1, wherein the waist support member securing portions are disposed at top ends of both of the waist support members.

3. A disposable diaper as defined in claim 1, wherein the width of the other waist support member is narrower than the length of the opening from the top end to the base end.

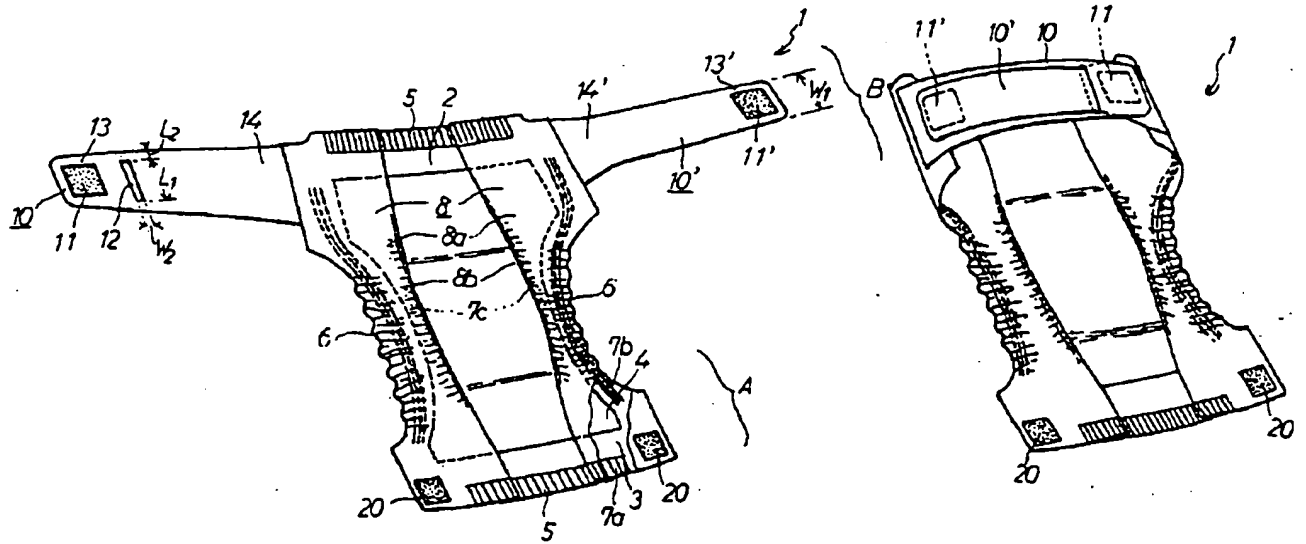

4. A disposable diaper as defined in claim 1, wherein at least either of the pair of waist support members is at least partially shrinkable.

5. A disposable diaper as defined in claim 1, wherein the waist portion on the belly side or the waist portion on the back side is at least partially shrinkable.
